The exterior of the building from the back, this will be transformed into the car park, there is an access door into the building from the car park as well. The large windows will remain the same size to allow for the natural daylight to flood the apartments. They will be upgraded and clear glass added instead. The brick work will be cleaned up, the trees will remain to soften to exterior look.

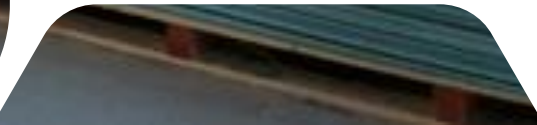

Ground Floor, the main front doors coming off City Road. Corridor's will be created from here leading to the apartments. Work has started from the top floor down, next week the partitions will go up on the ground floor and the ceiling added.

To the left of the entrance you can see the main staircase to upper levels, there is also a staircase off the car park entrance.

Ground floor, picture to left is the living area to a 1 bed apartment, the windows will be lowered to come in line with the adjacent apartments. Giving a more aesthetically pleasing view from the exterior. Picture centre, this will house the electrics and water storage tanks to the building, this is near to the main entrance doors. Picture right is the rear staircase to the upper floors.

Stairwells flooded with natural daylight.

All corridor's in place on upper levels.

Space cleared ready for ceiling and walls.

Electrics are almost complete on the upper levels.

View of an apartment from it's entrance hallway.

Huge amount achieved in the first month, putting City Road well on schedule for completion January 2019!
